## BURNETT'S Formula No. 1 LAWN GRASS SEED

### WHY THE MYSTERY

*Why Shouldn't You Know What Is in a Good Lawn Grass Seed Mixture Before You Buy It You Should Know What You Are Buying* ?

**FACT 1.** The more Chewing's Fescue and Kentucky Blue Grass a mixture contains, the better the mixture.

**FACT 2.** Both are Perennials and live indefinitely. However, they require two or three years to reach full maturity.

**FACT 3.** Meanwhile they need quick-growing Red Top and Rye Grass as nurse crops to shade them in their early growth.

**FACT 4.** Your first year's lawn is mostly Red Top and Rye Grass.

**FACT 5.** After a few years, Chewing's Fescue and Kentucky Blue Grass will be at their best; they form the permanent lawn.

### BURNETT-SEEDSMEN'S "FORMULA No. 1"

is the No. 1 Lawn Grass Seed Mixture

because it is made up of 25% Chewing's Fescue—25% Kentucky Blue—25% Red Top—25% Rye Grass.

ALL-AMERICA SELECTIONS

1948

*ALL the "All America Selections" introduced since 1933 are grouped here. They represent the newest developments in flowers, the latest fashions. In making these your choice, you are assured of having selected the best for your garden.*

## HERE IS HOW THE "ALL AMERICA SELECTIONS" ARE MADE

"ALL AMERICA SELECTIONS" are the choice of the Nation's leading horticultural judges, as being the most worthy new varieties introduced each year. They include species from around the World, imported and planted in twelve different localities in the United States, from whence they are judged. Their recommendations are authentic and dependable; your safeguard against ambiguous creations or claims. Novelties within our garden walls intrigue us, for they tax our keenest anxiety in expectation of unrevealed new beauties—and we pride ourselves of keeping in with the modern touch.

## BROCCOLI

Easier to grow than Cauliflower.  
Fifty Day Sprouting Calabrese

Just think of it—you can pick "Fifty Day Sprouting Broccoli" in 40 to 50 days after transplanting. It is unquestionably the earliest in cultivation, yet may be used for late sowing (up to July). The heads are large, deep green, the texture extra fine and tender, the taste superb. It is a sprouting type, producing many lateral heads after the center head is cut; being a great heat resister, it will not burst into flower. Seeds of this superlative variety were imported direct from the grower in Italy.

# About Your Lawn

## SOW The Best GRASS SEED MIXTURES ON The Best SOILS Only

"The better the Lawn Grass Seed Mixture used, the better the lawn produced." That is true only if you bear this in mind, "The better the soil planted, the better the lawn produced." One without the other means a waste of time and money. Both requirements are necessary for a **permanent** lawn.

## WHAT IS MEANT BY BETTER SOILS?

The deeper the top-soil (friable loam, a handful crumbles when palm is opened) the better the soil. The deeper the top-soil, the deeper will grass roots penetrate. The deeper the grass roots go into the ground, the better the chances of grass surviving Summer droughts. Clay soil or hard pan bakes after a rain preventing grass roots from breathing. Sandy soil is so porous, rain and moisture leach rapidly out of the ground. These two types of soil must be replaced or converted into loam, the deeper the better.

## HOW TO CONVERT CLAY OR SANDY SOILS?

It takes time. The more patient you are, the more successful you will be. If you forego an entire growing season by planting a succession of cover crops you will not regret it. Rye, Winter Vetch, Soy Beans, Cow Peas and Crimson Clover are excellent cover crops. All except clover sow at the rate of 5 lbs. per 1000 sq. ft. clover, but 1 lb. per 1000. Rye seed produces an abundance of greens. The other four being legumes bring nitrogen into the soil by extracting it from the air. Start with Rye seed. Sow broadcast. Rake lightly and cover an inch or so of Peat Moss. After a few months when growth has reached a height of one foot or more, turn under. Be sure and bury the stalks as well as the roots. Spread Agrico Lawn fertilizer 25 lbs. to every 1000 sq. ft. Now sow any one of the other four crops, rake, cover with Peat Moss. When high enough turn under, fertilize. Repeat this process as often as desired. Remember the more crops planted and buried the deeper the top-soil becomes. You can stop the plantings when you reach either of the two best lawn seeding periods, September or April. For Fall planting use either Rye or Winter Vetch and spade under in the Spring. Only these two will winter over.

## BEWARE IN BUYING TOP-SOIL

The best top-soils sold contain innumerable weed seeds. You won't notice them until the lawn comes up. Keep in mind, the cheapest lawn grass seed mixture does not contain weed seeds of Dandelion, Crab Grasses or Plantain. Weeds get into your lawn through top-soil, manure or are blown in. If you want to buy soil improving material, purchase Peat Moss, Humus, Cow Manure, Driconure or Bovung. These materials carry the least if any weed seeds. Only a few inches of improved top soil are insufficient to maintain a permanent lawn.

All metal construction. Triples life of hose... eliminates kinks and twists... no need to drag hose on the ground... no more soiled clothes. Holds 150 feet of hose. Can be assembled in five minutes.

\$29.95 prepaid 50 miles.

## FINAL PREPARATIONS OF SOIL

After turning under the last cover crop, allow a few weeks time for it to rot, and for the ground to set. Test soil for fertility deficiency by using a soil testing kit or mailing a sample to your state Agricultural Exper. Station. Add the recommended quantity and quality of fertilizer, and rake in thoroughly. Rake and roll the ground, being careful not to leave any depressions or gullies into which rain will accumulate and sour. Your last step is to rake smooth of stones and slope very slightly to allow excess rains to flow off.

## SEEDING THE LAWN (1 lb. will sow 200 sq. ft.)

Using the handle of your rake as a marking stick, divide the area into several sections. In sowing each boxed section your eyes will be confined and not wandering which makes for more thorough sowing. If you use a fertilizer and grass seed spreader, this dividing is not necessary. After the entire area has been sown, rake lightly by drawing the rake towards you. Since raking is for the purpose of making ridges into which the seed drops and soil falls on top of it, be careful to not let the teeth of the rake go too deep into the soil. To do so, you would draw the soil away in spots leaving them unseeded. To avoid this, grasp the end of handle with the right hand and the underside of the middle of the rake with the left hand. This is the best method for covering the seed. Do not scatter soil over the seed. This method makes too uneven a covering. After raking, roll the ground lightly. If a roller is unavailable, lay a plant board on lawn and step on it or use a sod tamper. Rolling or tamping the seed is important. By so doing you pack the seed into the soil, eliminating all air pockets. This makes for better germination. The last step is to water the lawn with a fine sprinkler or nozzle unless you are fortunate to have a rain fall immediately after you have completed the job.

## LATER CARE OF THE LAWN

When the first good growth of grass has appeared, do not cut it. Instead, roll it lightly. These grass seedlings in breaking through the ground push up the soil. Rolling repacks the soil. After a few days you can mow the lawn without danger of pulling out the grass. Any time you dig out a weed, be sure and sow a little grass seed in that spot. Keep the soil covered with grass at all times. Weeds are blown on your lawn daily by the thousands. Many of them sprout. If they cannot touch soil, they wilt away and die. There are many chemicals for killing weeds in lawns, Zotox, 2-4-D and "Tat-C-Lect". Some report success with them. Top-dress your lawn twice a year, Spring and Fall, preferably before a rain.

## By Using Hormodin Powder

Hormodin Powder makes it possible to propagate practically all varieties of plants from cuttings. Hormodin Powder contains the hormone-like plant growth substance (Indolebutyric Acid) that stimulates rapid root growth on cuttings.

Since different plants require different treatment, Hormodin Powder has been developed in three strengths, paralleling the range of hormones in nature.

The granules formed are porous and laminated having absorbing power greater than humus. Can be also used outside as a mulch or mixed with clay soils to make them friable. ## Asters a (Wilt Resistant)

Need no introduction, but what is **Wilt Resistant Aster Seed**? It's a strain of seed produced from plants that were grown in heavily wilt-infested soil. It is reasonable to infer that if a strain was able to grow to full maturity and bear seed, it's genera or offspring must likewise be immune to wilt. Don't take chances, sow **Wilt Resistant Strain Asters** wherever possible.

**Asters prefer rich sandy or loamy soil.** Use well rotted manure or phosphate fertilizer. Cultivate and water regularly. Sow seeds six weeks before intended transplanting; water immediately after. Set tall varieties 18 in. apart, medium sorts 12 in. apart, dwarf types 9 in. apart.

## Delphinium Seeds

**VETTERLE & REINELT'S (PACIFIC HYBRIDS)** were awarded a gold medal at the 1939 and 1940 Oakland Spring Garden Shows, the annual flower events of the Pacific Coast. Could not compete in 1941.

**V. & R. Delphiniums** are classed with the top-ranking strains of the world. Praises of them are just as numerous and sincere from the professionals as from the amateurs.

**HAND CROSS-POLLINATED** seed is V. & R.'s best strain. This stock possesses the most desirable characteristics, qualities which are intensified to the greatest degree possible. The percentage of **show specimens** from this hand cross pollinated seed is the highest obtainable.

**SELF-POLLINATED** seed is collected from outstanding plants and will produce plants fairly uniform in color and type. For exhibition plants, however, sow the hand cross pollinated seed.

**Blue Bird Series** (new 1941). At last a true blue Delphinium; clearest medium blue with white bee. Besides coming true to color they carry well rounded  $2\frac{1}{2}$  in. flowers; long graceful spikes. A new standard in blues of today.

**BLACK KNIGHT** (new '39). The darkest of them all; the heavy, velvety texture lends a tone vividness and luminosity never seen before;  $2\frac{1}{2}$  in. florets; long, well formed spike.

**BLUEJAY**. Strikingly clear true blue, medium to dark, intense and alive with dark contrasting bee.

### PARADISE (New '41) Illustrated)

Here is an asparagus that actually comes into bearing **ONE YEAR EARLIER** than any other variety. An exceptionally strong, vigorous producer. Some say it produces twice the crop of ordinary asparagus. The stalks are like Martha Washington in appearance, large and green. Just imagine, only 6 to 8 stalks needed to make a pound. Its flavor is unusually mild and liked by all. Paradise is rust-resistant. Seed sown in Spring will bear asparagus for picking 2 years later. One year old Paradise roots, set out this Spring, will produce next year, asparagus as large and stalky as ordinary two- and three-year-old roots.

## Broccoli

Easier to grow than Cauliflower.

No other table green has captured the appetites of a Nation more than Broccoli, and why not? Its delicious fine flavor is appetizingly pleasing even to children, yet rich in iron; more easily digested and is of easier culture. Set plants 18 in. apart in rows and 24 in. between; when the center flowers form, cut with about 7 in. of stem; this will be followed later by several smaller heads. No fuss in tying up, like in cauliflower.

### Fifty Day Sprouting Calabrese

Just think of it—you can pick "Fifty Day Sprouting Broccoli" in 40 to 50 days after transplanting, in certain localities; 50 to 60 in others. It is unquestionably the earliest in cultivation, yet may be used for late sowing (up to July). The heads are large, deep green, the texture extra fine and tender, the taste superb. It is a sprouting type, producing many lateral heads after the center head is cut; being a great heat resister, it will not burst into flower. Seeds of this superlative variety were imported direct from the grower in Italy.
